

## Redefining data collection and reporting

AuditMatic uses proven mobile and web-browser technology to increase the speed and accuracy of your data collection and analysis processes while vastly reducing or eliminating the expense of data transcription, report generation, and process compliance score carding.

Lower Costs

Increase Productivity

- Collect the data you want, when you want, the way you want.
- View and report in real time from anywhere.
- Make informed decisions and act quickly.

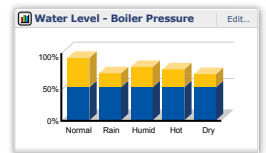

### Data Collection

AuditMatic forms can be filled out and submitted using smart phones, rugged PDAs or web browsers, allowing field workers to collect and enter data on the move as well as at their workstations. Innovative data collection capabilities including image capture and operator location verification add to the AuditMatic advantage.

### Reporting

AuditMatic provides both content and process compliance reporting capability. Content reporting allows collected data to be charted, analyzed, and shared. Process compliance reporting provides scorecards representing adherence to regulatory or internal data collection frequency and timeliness requirements.

### Cost Savings

Transcription, report generation, and compliance score carding labor can be vastly reduced or eliminated utilizing AuditMatic. Allow your workforce to be more productive utilizing their process knowledge skills, not their typing skills.
