

Menu for Proficiency iFIX

A COMPLETE NAVIGATION SYSTEM WITH A FAMILIAR LOOK AND FEEL

MENU for Proficiency iFIX provides common Windows and Internet navigation functions that are instantly familiar:

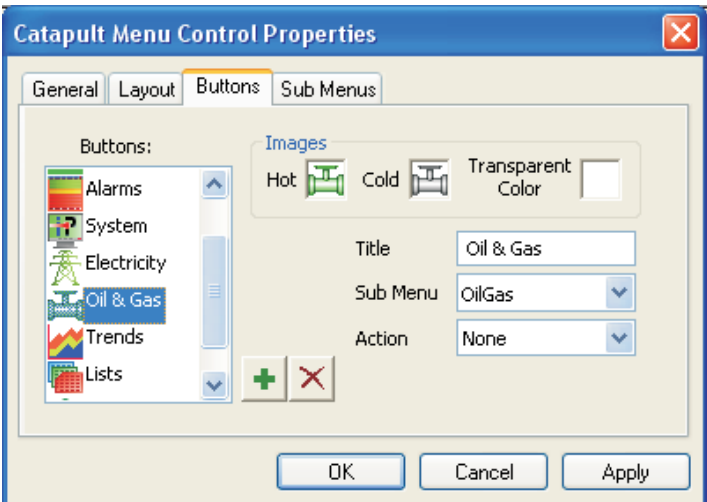

- Back:** Recalls previously displayed picture or pictures
- Forward:** Returns after using 'Back'
- Home:** Displays your chosen home or start-up picture
- Favorites:** Lets each user add/organize quick access to their personal favorite displays
- Window:** Shifts multiple windows between back and front
- Help:** Access iFIX electronic books; iPower Operator and Configurator Guides; Online support request

This configurable menu allows customers to choose any of these standard buttons, plus whatever else they need. In the example above buttons like "Oil&Gas" display pictures of a particular type. Other buttons like "System" provide access to specific functions:

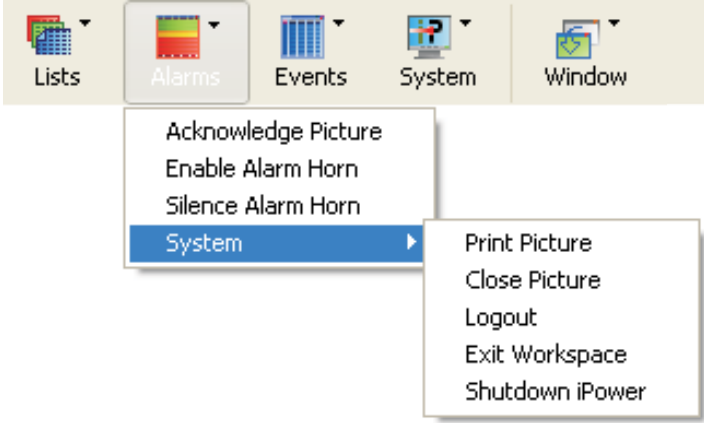

Acknowledge picture	Exit workspace	Open picture group
Alarm horn toggle	Login/Logout	Print picture
Alarm horn silence	Mission control	Shutdown iPower
Close picture	Operator message	Switch to configure
Database manager	Open picture	VBA script

Some of these functions are only applicable when other Catapult products are installed.

A **MENU** is an ActiveX Control dropped into an iFIX picture during configure mode in the iFIX Workspace. It is delivered with useful default settings, but is easily configured:

Any top level menu can have multiple levels of nested sub-menus:

Menus can be configured with both picture icons and text labels (top example) or just text, or just icons...

Automatic Picture Insertion:

The menu system can automatically include new pictures into the appropriate location. Different types of pictures can be easily directed into different menus or sub-menus, based simply on how you name them. It is easy to set up, 100% flexible and completely automatic.

Run VBA: Configure menus and sub-menus to trigger your VBA scripts

About MENU MENU delivers additional services to GE Fanuc's Proficiency iFIX. MENU can be added to a new or existing iFIX system
