Question:

How can I prevent ALT-TAB switching in iFIX?

Answer:

To prevent someone from being able to use ALT-TAB and switching out of iFIX, please follow these steps:

- From the iFIX Workspace, go to the Home tab, and click on Settings, and then click User Preferences
- From there, click on Environment Protection
- Enable Run Time Environment Protection
- Select Disable Task Switching to prevent the ALT-TAB functionality

- For more information about security options, check out the “Configuring Security Features” E-Book, which can be downloaded here: <https://automatech.box.com/v/iFIX58Docs>
